Dear Members,

I'd like to show you the results of a patient of 41 years old, by who a FUT of 1871 grafts is achieved, by the Doctor Lupanzula.

At the request of the patient a special strategy was used.

This strategy consisted of a frontal crescent-shaped line with a good density, the area behind a zone without graft and then a cover of the mid scalp with a good density.

This patient didn't take any treatment against hair loss before the surgery. Since the third week after the surgery, he takes 5% minoxidil 2x/day and finasteride 1 mg/day.

With Kind Regards

Amani
