The patient above came to Dr. U after experiencing hair loss in her temple areas due to traction alopecia. Traction alopecia, sometimes called tension hair loss, is the condition in which harsh hairstyles like tight ponytails or weaves pull the follicles from their roots. Over time, the follicles fall out, resulting in permanent hair loss. Although it mostly affects women, there have been increased cases of traction alopecia in men.

Dr. U decided to restore the patient's hair loss with a FUE hair transplant using his advanced Dr.UGraft system. He extracted 200 grafts from the donor area on her head using his hybrid FUE tool, the Dr.UPunch Rotor.

Dr.U then reconstructed the hairline by carefully inserting the UGrafts into the bald area on the patient's temple. By taking into account the growth pattern on the scalp and matching it, Dr. U is able to produce natural results.

The patient is very happy with the results of her surgery. Using the Dr.UGraft system, she was able to cure her hair loss. The patient can pull her hair up without fear of showing off her bald spots, which gives her more confidence in her appearance.
