Hier ein schönes Beispiel was Natürlichkeit betrifft :

Patient aus Norwegen, 12 Monate nach der OP, 3000 Grafts. Wurde 2005 operiert.

Hat kein Problem damit wenn ein Deutscher (oder Schweizer) ihn in Norwegen erkennt

the study. The study was approved by the local ethics committee of the University Hospital Groningen. The study was performed according to the principles of the Declaration of Helsinki. The patients gave their informed consent before entering the study.

Study design

The study was a randomized, controlled trial. The patients were randomly assigned to either the treatment group or the control group. The patients in the treatment group received a 12-week course of treatment with the combination of metformin and rosiglitazone. The patients in the control group received a 12-week course of treatment with metformin alone. The patients in the treatment group received a 12-week course of treatment with the combination of metformin and rosiglitazone. The patients in the control group received a 12-week course of treatment with metformin alone.

Patients

The patients were recruited from the outpatient clinic of the University Hospital Groningen. The patients were recruited from the outpatient clinic of the University Hospital Groningen. The patients were recruited from the outpatient clinic of the University Hospital Groningen.

Interventions

The patients in the treatment group received a 12-week course of treatment with the combination of metformin and rosiglitazone. The patients in the control group received a 12-week course of treatment with metformin alone. The patients in the treatment group received a 12-week course of treatment with the combination of metformin and rosiglitazone.

Measurements

The patients were followed up for 12 weeks. The patients were followed up for 12 weeks. The patients were followed up for 12 weeks. The patients were followed up for 12 weeks. The patients were followed up for 12 weeks.

Statistical analysis

The data were analysed using the intention-to-treat principle. The data were analysed using the intention-to-treat principle. The data were analysed using the intention-to-treat principle. The data were analysed using the intention-to-treat principle. The data were analysed using the intention-to-treat principle.

Results

The patients in the treatment group received a 12-week course of treatment with the combination of metformin and rosiglitazone. The patients in the control group received a 12-week course of treatment with metformin alone. The patients in the treatment group received a 12-week course of treatment with the combination of metformin and rosiglitazone.

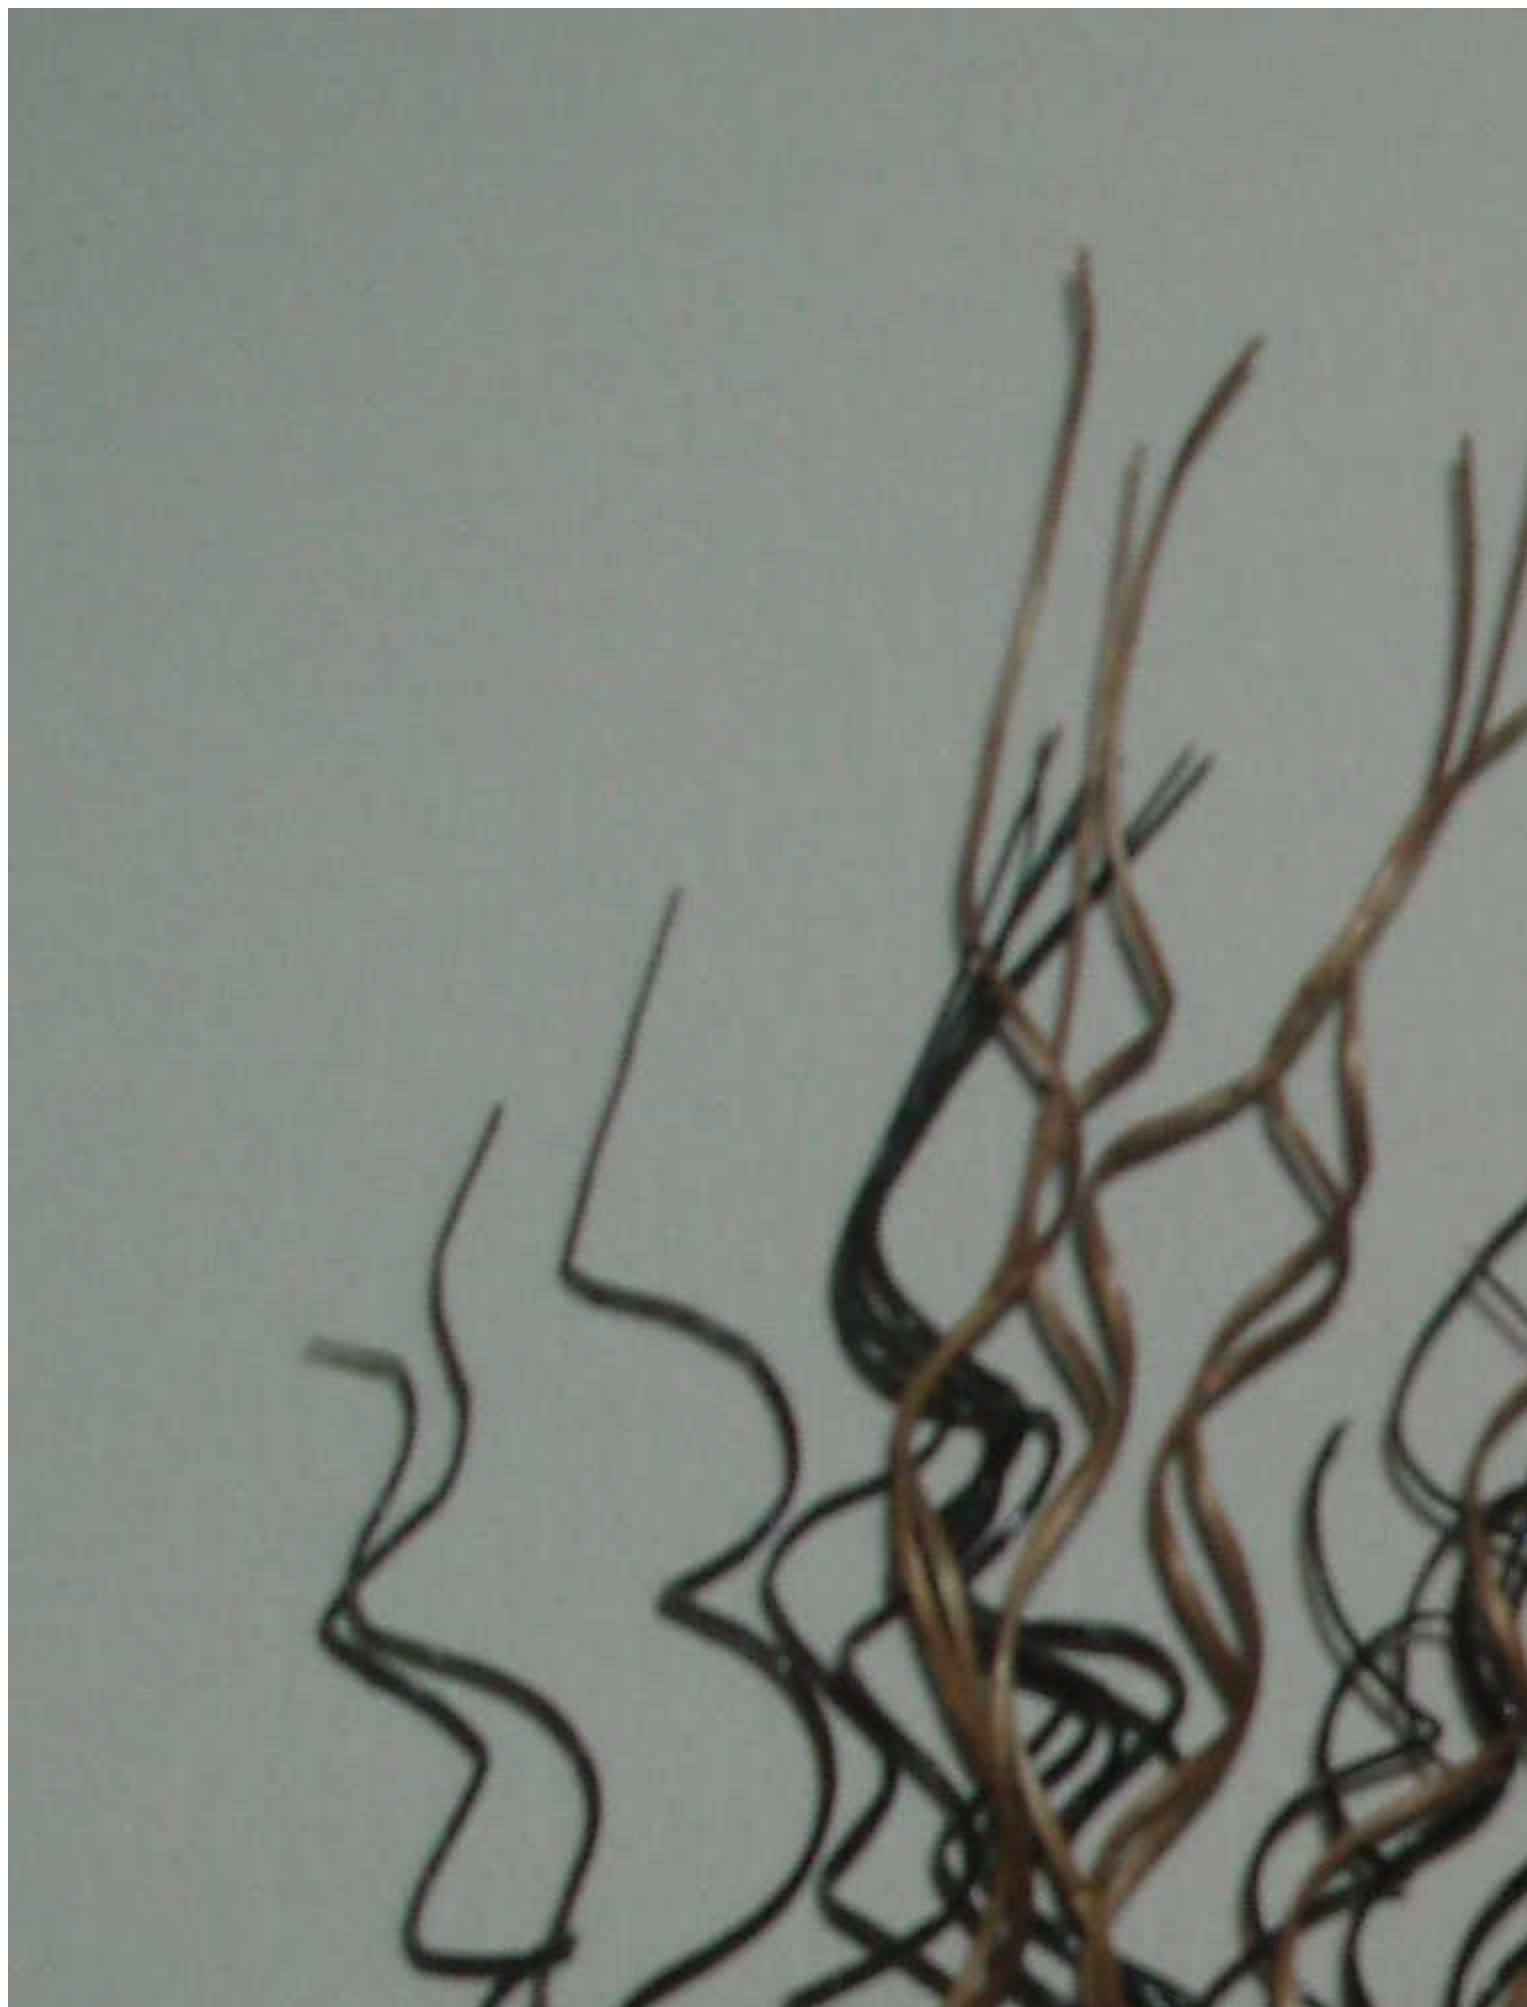

Conclusion

The patients in the treatment group received a 12-week course of treatment with the combination of metformin and rosiglitazone. The patients in the control group received a 12-week course of treatment with metformin alone. The patients in the treatment group received a 12-week course of treatment with the combination of metformin and rosiglitazone.

hast du vllt. noch mehr bilder?
da das zweite bild mit blitz aufgenommen wurde und man seinen behandlungsbereich nicht besonders gut erkennt bzw. mehr sein gesicht sieht.

dr. keser macht aus meiner sicht in letzter zeit sehr gute arbeit und deshalb ist er eine gute alternative.

Ich hab noch eingie von diesem Herrn, aber da erkennt man noch weniger.

Es werden in Zukunft bessere und umfangreichere Patientbilder von Dr.Keser gepostet, welche man auch besser beurteilen kann.

Gruss
