zitat:

"Important news about Spectral.DNC

Following a program of continuous innovation and product improvement, DS Laboratories has made several important upgrades to its Spectral.DNC brand, starting with batch 905021, currently shipping. The formula now utilizes a very-high-purity molecule of copper peptide, a result of nanotechnology due to its particle size. The US Food and Drug Administration defines nanotechnology as components with a particle size smaller than 0.1 microns.

This refinement allows improved delivery of copper peptide into the base of hair follicles, where the molecule exhibits its well-known effects by generating new cells, inhibiting inflammation, and stimulating tissue repair, leading to significant benefits in hair regrowth therapy. Since copper peptide also exerts an anti-aging effect, this ingredient facilitates improved overall scalp health.

Utilization of the nano-size copper peptide necessitated a change in some base materials, which allowed us to improve the color and texture of the product as well. While previous versions of Spectral.DNC were more likely to color the scalp a bit yellow, the improved version leaves little or no residue. The new version also features a lighter scent due to the use of these new compounds, which was also preferred by users.

We believe our customers will gain significant benefits from this upgrade — mainly more rapid and pronounced results — and enjoy the improved texture and comfort. We will continue to pursue product innovation in the development of the world's most effective topical treatments for hair growth."
