interview mit cooley

vom audio file:

the best way that I can describe it: this contains a very important piece of the puzzle, it's a breakthrough. But: I have not documented new hair. But: it does appear to be able to restore transacted or injured hair follicles... + copy plugged hairs.

when u plug a hair its gonna grow back from the side u plugged it... when we code is with this acell product an then transplant it... it's stimulates the body to rebuild the follical around the plugged graft...

interviewer: "that basically... if this is truely possible: you would have unlimited donor?"
cooley: YES

SO!

ich habe nur ein paar dinge mitgeschrieben.

dr. cooley sagt: es ist schon jetzt möglich unlimitierten donor zu produzieren. wenn ich es richtig verstanden habe ist er in der lage transplantierten haaren mittels acell einen regrow-faktor einzubauen. dementsprechend werden follicel um das bereits transplantierte haar regeneriert.

der interviewer meint dann noch: I've been into this industry for over 13 years and this is the best news I've ever heard - and I don't wanna overhype this... if this it what you say it is it's monomental news.

hörts euch an, gebt bescheid.
GOOD NEWS!
