Hallo Haardefizitiäre Leidensgenossen,

da ich automatisch die News aus verschiedenen Foren und Blogs bekomme, habe ich mal ein Update aus der Spencer Kobren Corona rausgepickt.

Bitte sehr :

A colleague just sent me this. How is this not awesome.

HSC caused a response in over 80% of subjects who grew 40-60% more hair. Pretty impressive.

Current trials show 8% increase in hair density at 12 weeks decreasing to 6% at 24 weeks then rising to 30-40% at 48 weeks (average of all subjects)

It also works in difficult to treat temples with increased density of 20-25%

Hairs that were there at 1 year were still there at 2 years.

The conference was told a treatment course of two lots of 50 injections 6 weeks apart would cost USD2000. They say you have about 50 injections a session.

Grüsse

Kellboy
