Wehe es schreibt jemand noch einmal was negatives zu dem Alpecin After Shampoo Liquid

July, 14th 2006 Not many people have realized the "hidden sensation " of this years EHRS conference. Researchers at the German University of Jena found that caffeine counteracts the growth inhibitory effects of testosterone. Growth suppression caused by DHT was ex-vivo completely neutralized by caffeine 0.005 %. Further caffeine significantly stimulated hair growth. Because of the ex vivo character of the study the exact effective dosage for a topical caffeine preparation needs to be determined. 6 % minoxidil, caffeine, cyanocobalamin and carnitin tartrate will be part of the new Lipoxidil-6 coming out this August
