Adistem® Scalp Stem Cell Transplant Kit:

CONTENTS:

AdiStem Lipo-dissolve™ 3 x 8ml

Adistem Stem Cell Activator Complex BTM 3 x 8ml

FEATURES:

\* optimized for autologous adipose-derived adult stem cell transplant into the scalp using mesotherapy to tackle hair loss and male/female-pattern baldness.

\* For THREE procedures only.

---

"AdiStem Ltd. is a biotechnology company which discovers, develops and provides to licensed doctors autologous adult adipose-derived stem cell products that address serious medical conditions and assist in particular cosmetic and plastic surgery procedures.

AdiStem Ltd. owns proprietary technologies which are licensed to doctors for stem cell administration. Due to its doctor licensee relationships and collaborative efforts with medical institutions, AdiStem Ltd. believes it is now a leading provider of autologous adipose-derived adult stem cell products and procedures."

---

"Our own preliminary (unpublished) results in human subjects, where wound-healing was tested by the introduction of freshly isolated SVF into the wound, revealed that the SVF on its own proved less effective than when the SVF was incubated for one hour in our prototype Stem Cell Activator Complex XTM, before being re-introduced into the patient.

Along with cell culture studies, this confirmed our hypothesis that adipose-derived ASCs though large in number are in some way dormant and that they require activation to come into full functionality i.e. to begin self-renewal by cell division and formation of other cell types by differentiation and transdifferentiation. After extensive testing, optimization studies of our prototype culture medium, pilot studies and full-scale human trials, AdiStem Ltd. is pleased to present our proprietary technology in the form of three serum-free, in vitro cell culture kits: the AdiStem® Stem Cell Transplant Kit, the AdiStem® Fat Transfer Kit and the AdiStem® Scalp Stem Cell Transplant Kit."

Website zeigt 2 vergleichsbilder, beide beweisen letztendlich nichts und wurden verschwommen mit unterschiedlichen Lichtverhältnissen und Perspektiven aufgenommen.

Youtube-Video ist offline.

Bullshit.
